

Foreign Exchange (FX) Exposure Management in Emerging Markets Training Course

OGI-1162 · 5 days · 15 CPD hours · English

Overview

Foreign Exchange FX Exposure management is a critical treasury capability for oil and gas organisations operating across emerging markets, where volatile currencies, restricted convertibility, exchange controls and changing payment conditions affect cash flow, project economics and financial reporting. The Foreign Exchange FX Exposure Management in Emerging Markets Training Course from [Institute For Oil & Gas Training](#) develops practical capability to identify, measure, monitor and manage currency exposure across upstream, midstream, downstream and energy service operations.

Oil and gas businesses frequently operate through international supply chains, production-sharing arrangements, joint ventures, local subsidiaries, contractors and cross-border financing structures. Revenues can be linked to international commodity prices while operating costs, payroll, taxes, supplier invoices and local content payment obligations are denominated in domestic currencies. This creates mismatches between the currency of receipts and the currency of expenditure. Effective Foreign Exchange FX Exposure management therefore forms an important part of treasury, cash and banking strategy.

The course addresses the practical challenges created by currency convertibility risk, exchange control regulations, devaluation risk, parallel market rates and repatriation restrictions. It examines how treasury teams assess exposure before transactions are executed and how they monitor currency positions after commitments, invoices and settlements arise. Participants develop a structured approach to distinguishing transaction exposure, translation exposure and economic exposure and to connecting these exposures with wider cash management and financial planning processes.

Particular attention is given to emerging-market environments where official exchange rates and market rates can diverge, currency conversion can be restricted, and access to foreign currency can influence payment timing. The course examines how parallel market rates affect financial decision-making, how repatriation restrictions influence subsidiary cash management and how exchange control regulations affect cross-border settlement arrangements.

The programme also addresses oil and gas contracting structures. Dollar linked contracts create specific treasury considerations when revenue is denominated in US dollars while expenditure remains in local currency. Local content payment obligations create additional domestic currency requirements that need to be incorporated into cash forecasts and exposure assessments. Participants learn how to map these requirements against expected inflows, supplier payments, tax liabilities, financing obligations and intercompany settlements.

Financial reporting considerations receive focused attention through the treatment of foreign currency transactions and FX revaluation of monetary items. Participants examine how exchange movements affect recognised balances, profit and loss, cash positions and management reporting. The course connects treasury decisions with accounting outcomes so that foreign exchange risk management is considered across both cash and financial reporting

perspectives.

The programme also develops practical approaches to scenario analysis. Participants assess the consequences of currency depreciation, delayed convertibility, changes in exchange control requirements, restricted foreign currency access and movements between official and parallel market rates. These scenarios help treasury professionals establish response plans based on documented exposure rather than relying on reactive currency decisions.

Institute For Oil & Gas Training delivers the course for professionals responsible for treasury, cash, banking, finance, commercial management, project finance, accounting and corporate risk. The content is designed around operational situations encountered by organisations with international revenues, imported equipment, foreign currency financing, local procurement obligations and cross-border cash flows.

Objectives

- Develop a practical framework for identifying Foreign Exchange FX Exposure across oil and gas operations
- Distinguish transaction, translation and economic foreign exchange exposure
- Assess currency convertibility risk within emerging-market treasury environments
- Understand the treasury implications of exchange control regulations
- Evaluate devaluation risk and its effect on cash flows, project costs and financial results
- Analyse the impact of parallel market rates on treasury decisions and cash planning
- Assess repatriation restrictions when managing subsidiary and project cash
- Evaluate currency exposure arising from dollar linked contracts
- Incorporate local content payment obligations into foreign exchange exposure analysis
- Develop practical currency exposure registers and monitoring processes
- Integrate FX exposure into cash flow forecasting and liquidity planning
- Understand the implications of FX revaluation of monetary items
- Connect treasury decisions with financial reporting requirements
- Apply scenario analysis to emerging-market currency conditions

- Strengthen communication between treasury, finance, accounting, commercial and operational teams
- Improve the consistency of foreign exchange exposure reporting to management
- Support more disciplined decisions concerning foreign currency payments and receipts
- Establish practical response processes for changing currency conditions

Training methodology

Institute For Oil & Gas Training uses a practical corporate delivery model built around real-world oil and gas treasury situations. The programme combines technical presentations with case studies, structured discussions, exposure-mapping exercises, scenario analysis and practical simulations.

Participants work through emerging-market currency scenarios involving currency depreciation, restricted convertibility, exchange controls and delayed repatriation. These exercises demonstrate how treasury decisions change when foreign currency availability becomes constrained or when official exchange rates no longer provide the only relevant reference for commercial planning.

Case studies examine oil and gas transactions involving dollar linked contracts, domestic operating costs, foreign suppliers, local contractors and cross-border funding. Participants identify the currency position created by each transaction and determine how the exposure affects cash forecasting and treasury management.

Group exercises focus on constructing currency exposure maps. Participants distinguish committed transactions from forecast transactions and assess the effect of currency movements on expected cash inflows and outflows. The exercises reinforce the connection between operational commitments and treasury exposure.

Scenario simulations address devaluation risk and parallel market rates. Participants evaluate the financial consequences of different exchange-rate environments and develop response actions for treasury teams. The emphasis remains on disciplined exposure measurement, documented assumptions and practical decision-making.

Financial reporting exercises examine FX revaluation of monetary items and the interaction between treasury activity and accounting records. Participants assess how foreign currency balances change following exchange-rate movements and how those movements enter management reporting.

The methodology also incorporates discussions of exchange control regulations and repatriation restrictions. Participants examine how treasury processes need to account for regulatory requirements governing foreign currency conversion, cross-border payments and movement of funds.

Organisational impact

Effective Foreign Exchange FX Exposure management improves the quality of treasury decision-making across oil and gas operations. Sponsoring organisations gain a structured approach for identifying where currency risk enters the business and how it affects cash requirements, supplier payments, project expenditure and financial reporting.

The course strengthens visibility over foreign currency cash flows. Treasury teams can align expected foreign currency receipts with known payment requirements and identify mismatches earlier. This supports more accurate liquidity planning and improves communication between treasury and operating functions.

Better understanding of currency convertibility risk supports stronger cash planning in emerging markets. Organisations gain clearer processes for assessing whether expected local currency balances can be converted into required foreign currencies and whether exchange restrictions affect planned settlements.

The course also improves awareness of exchange control regulations. Treasury, finance and commercial teams gain a common framework for recognising regulatory requirements that affect foreign currency transactions, cross-border payments and the movement of funds. This strengthens internal coordination and supports more controlled transaction processing.

Devaluation risk receives structured attention because currency depreciation can materially change local operating costs and the domestic value of foreign currency obligations. Organisations gain stronger processes for modelling currency movements against budgets, forecasts and contractual commitments.

Understanding parallel market rates supports better treasury analysis where official and alternative market rates differ. Participants learn to recognise the financial implications of rate differentials and incorporate appropriate information into exposure monitoring and management reporting.

Repatriation restrictions can create trapped cash within subsidiaries or operating jurisdictions. The course strengthens organisational capability to identify these constraints when forecasting liquidity and planning intercompany funding or dividend movements.

The treatment of dollar linked contracts also becomes more transparent. Organisations can identify the relationship between foreign currency revenues and local currency expenditure, helping treasury teams understand where natural offsets exist and where additional exposure remains.

Local content payment obligations are incorporated into currency planning rather than treated as isolated procurement requirements. This supports closer alignment between treasury forecasts, procurement schedules, supplier commitments and operational budgets.

Financial reporting processes also benefit from stronger coordination between treasury and accounting. Understanding FX revaluation of monetary items helps finance teams identify the accounting consequences of foreign currency balances and exchange-rate movements.

The overall organisational impact is stronger currency exposure visibility, more structured cash forecasting, improved coordination between departments and better alignment between treasury management and financial reporting. The course provides a common professional language for discussing currency risk across treasury, finance, commercial and operational functions.

Personal impact

Attendees develop practical capability in Foreign Exchange FX Exposure identification and management that applies directly to corporate treasury and finance responsibilities. They gain a structured understanding of how foreign

currency risk enters oil and gas businesses through revenues, procurement, financing, contracts and operational expenditure.

Participants strengthen their ability to analyse currency positions rather than treating exchange movements as isolated market events. They learn to connect individual transactions with wider cash flow exposure and distinguish between actual commitments and forecast requirements.

The course develops practical understanding of emerging-market treasury challenges. Attendees gain greater awareness of currency convertibility risk, exchange controls, repatriation restrictions and differences between official and parallel market rates.

Treasury professionals strengthen their cash forecasting capability by incorporating foreign currency receipts, payments and settlement constraints into liquidity planning. Finance professionals gain greater understanding of the relationship between treasury exposure and accounting outcomes.

Participants also improve their ability to evaluate dollar linked contracts and local content payment obligations from a treasury perspective. This supports more effective communication with commercial, procurement and operational teams.

The course enhances scenario analysis skills. Attendees learn to assess the implications of devaluation risk and changing foreign exchange conditions using structured assumptions and documented exposure information.

Professionals responsible for reporting gain stronger understanding of FX revaluation of monetary items and the effect of foreign currency movements on reported financial results.

The capability gained through the programme supports career development across treasury, cash management, corporate finance, financial control, banking relationships, project finance and commercial functions. Participants leave with practical frameworks that support more consistent analysis and communication of foreign exchange exposure within their organisations.

Who should attend

- Treasury Managers and Treasury Officers — responsible for foreign currency exposure, liquidity and banking activities.
- Cash Managers — responsible for forecasting and managing cash inflows and outflows across multiple currencies.
- Finance Managers and Financial Controllers — responsible for financial management, reporting and currency-related accounting impacts.
- Corporate Finance Professionals — responsible for funding, liquidity and financial risk analysis.
- Oil and Gas Accountants — responsible for foreign currency transactions and FX revaluation of monetary items.

- Project Finance Professionals — responsible for assessing currency exposure within capital-intensive oil and gas projects.
- Commercial Managers — responsible for contracts containing foreign currency pricing and payment provisions.
- Procurement Managers — responsible for supplier commitments and local content payment obligations.
- Risk Managers — responsible for identifying and monitoring financial and market exposures.
- Banking and Relationship Managers — responsible for corporate banking arrangements and foreign currency services.
- Joint Venture Finance Professionals — responsible for coordinating financial flows between partners and operating entities.
- Financial Planning and Analysis Professionals — responsible for budgets, forecasts and sensitivity analysis involving currency movements.
- Senior Finance Executives — responsible for financial governance, treasury oversight and management reporting.
- Professionals involved in international oil and gas operations — responsible for cross-border transactions and multi-currency cash flows.

Course outline

Emerging-Market FX Exposure Fundamentals

This module establishes the foundations of Foreign Exchange FX Exposure management in emerging-market oil and gas operations. It examines how currency risk enters businesses through sales, procurement, operating expenditure, financing, intercompany transactions and project commitments. Participants develop a structured framework for identifying transaction, translation and economic exposure and connecting each exposure to treasury processes.

Currency Convertibility and Exchange Controls

This module focuses on the regulatory and operational conditions that affect access to foreign currency in emerging markets. Participants examine currency convertibility risk, exchange control regulations and the practical implications of restrictions on conversion, settlement and cross-border transfers.

Devaluation, Market Rates and Repatriation

This module examines the practical treasury consequences of currency depreciation, differing market rates and restrictions on moving funds between jurisdictions. Participants analyse devaluation risk, parallel market rates and repatriation restrictions and apply these considerations to emerging-market cash management.

Contractual and Operational Currency Exposure

This module connects foreign exchange management with commercial contracts and operating commitments.

Participants examine dollar linked contracts, local content payment obligations and the currency mismatches created when international revenues coexist with domestic expenditure requirements.

FX Revaluation, Reporting and Treasury Governance

This module integrates foreign exchange exposure management with accounting, reporting and treasury governance.

Participants examine FX revaluation of monetary items and develop processes for monitoring currency positions, reporting movements and communicating exposure information to management.

Scheduled dates

Dates	Venue	Format	Fee
05 - 09 Oct 2026	Abu Dhabi, United Arab Emirates	In person	£4,000
05 - 09 Oct 2026	Abuja, Nigeria	In person	£4,000
05 - 09 Oct 2026	Accra, Ghana	In person	£4,000
05 - 09 Oct 2026	Addis Ababa, Ethiopia	In person	£4,000
