

Forensic Accounting for JV Disputes & Claims Training Course

OGI-1128 · 5 days · 15 CPD hours · English

Overview

Forensic Accounting is a specialist capability for investigating financial records, evaluating disputed costs and establishing reliable financial evidence in joint venture disputes and claims. The Forensic Accounting for JV Disputes & Claims Training Course by [Institute For Oil & Gas Training](#) develops practical expertise in financial investigation, quantum analysis, contract claim assessment and dispute resolution support for oil and gas organisations.

Joint ventures involve complex financial relationships between operating partners, non-operating partners, contractors, service providers and other stakeholders. Joint operating agreements, production sharing arrangements, farm-in and farm-out agreements, cost recovery provisions, work programmes, budgets and partner billing processes create extensive financial records that require detailed examination when disagreements arise. A disputed invoice, questioned expenditure, allocation issue or alleged contractual breach can involve thousands of individual accounting entries and supporting documents.

Forensic Accounting provides a structured approach for tracing transactions, reconstructing accounting records, testing the validity of costs and establishing evidence that supports a financial position. In oil and gas operations, this capability is particularly relevant where partners challenge expenditure, overhead allocations, procurement costs, capital classifications, operator charges, project expenditure or cost recovery claims.

The course addresses the gap between conventional accounting review and the deeper financial investigation required for contentious matters. Participants examine how accounting data connects with contractual obligations, operational activity and documentary evidence. The programme focuses on identifying inconsistencies, testing accounting treatments, establishing financial causation and presenting findings in a form that supports management decisions, negotiations, arbitration and formal dispute processes.

Quantum analysis is a central element of the programme. Participants develop an understanding of how disputed amounts are identified, categorised, traced and quantified. The course examines the distinction between accounting differences and genuine financial loss, enabling professionals to build defensible calculations based on available records and contractual requirements.

Contract claim assessment is also examined from a financial perspective. Participants learn how to connect contractual provisions with accounting evidence and determine whether claimed amounts are supported by documentation. This includes reviewing invoices, purchase orders, payment records, cost reports, ledgers, budgets, timesheets, project records and other relevant evidence.

Disallowed cost investigation forms another important component. Joint venture disputes frequently involve costs that one party considers outside the approved work programme, inconsistent with the governing agreement or insufficiently supported. Participants learn structured techniques for identifying disputed expenditure, tracing its origin and assessing the evidence associated with each cost category.

The programme also develops capability in partner dispute evidence. Financial evidence must be complete, traceable and logically connected to the underlying transaction. Participants examine methods for organising evidence, preserving audit trails and presenting financial findings clearly to stakeholders.

Arbitration support is addressed through practical financial analysis and evidence preparation. Participants explore how forensic accounting findings contribute to dispute documentation, financial schedules, claim evaluation and damages calculation. The focus remains on factual financial analysis rather than legal advocacy.

Institute For Oil & Gas Training delivers this course for professionals who require stronger financial investigation capability in oil and gas commercial environments. The programme brings together accounting analysis, contractual review, financial evidence and dispute support within a single practical framework.

The course also considers reconstruction of accounting records where documentation is incomplete, inconsistent or fragmented. Participants learn how to work systematically with available records and establish a documented basis for financial conclusions. This capability supports organisations when historical transactions need to be reviewed during a claim, audit, investigation or partner disagreement.

By strengthening forensic financial analysis, organisations establish a more disciplined approach to disputed expenditure and financial claims. Attendees gain practical methods for investigating records, quantifying differences, documenting findings and communicating financial conclusions to commercial, legal, finance and operational stakeholders.

Objectives

- Develop practical Forensic Accounting capability for oil and gas joint venture disputes
- Strengthen financial investigation techniques for disputed transactions and expenditure
- Apply systematic methods for contract claim assessment
- Perform structured quantum analysis for financial claims and counterclaims
- Investigate disallowed costs using accounting and supporting documentation
- Trace disputed transactions through ledgers, invoices, payment records and cost reports
- Evaluate the reliability, completeness and relevance of partner dispute evidence
- Support arbitration processes through clear financial analysis and documented schedules
- Apply structured approaches to damages calculation
- Strengthen reconstruction of accounting records where historical information is incomplete

- Identify inconsistencies between contractual requirements and financial records
- Improve the preparation of defensible financial schedules for management review
- Distinguish supported financial amounts from unsupported or disputed amounts
- Improve communication of complex accounting findings to commercial and legal stakeholders
- Establish stronger financial controls around joint venture expenditure and partner billing

Training methodology

Institute For Oil & Gas Training uses a practical corporate delivery approach designed around the realities of oil and gas financial disputes. The methodology connects accounting techniques with contractual requirements, transaction evidence and commercial decision-making.

Case studies form a major part of the programme. Participants work through realistic joint venture scenarios involving disputed expenditure, questioned allocations, unsupported costs, budget variations, operator charges and financial claims. Each case requires participants to examine the available evidence before reaching a documented financial conclusion.

Practical forensic accounting exercises develop the ability to trace transactions through accounting records. Participants review general ledger information, supporting documentation, cost reports and financial schedules to identify inconsistencies and determine the financial significance of disputed entries.

Contract claim assessment exercises connect financial analysis with contractual provisions. Participants examine how financial records support or challenge particular claim components and learn how to establish a clear relationship between contract requirements and accounting evidence.

Quantum analysis simulations focus on the construction of financial calculations. Participants separate claimed amounts into appropriate categories, identify supported and unsupported values, test assumptions and develop transparent schedules for review.

Disallowed cost investigation scenarios provide practical experience in examining costs against agreed commercial requirements. Participants assess documentation, identify potential exceptions and establish an evidence trail for each finding.

Group exercises encourage cross-functional analysis. Finance, commercial, contracts, audit and operational perspectives are brought together to demonstrate how different departments interpret the same financial evidence.

Real-world scenarios also address incomplete records. Participants work through reconstruction of accounting records and develop systematic approaches for dealing with missing documentation, inconsistent classifications and fragmented historical data.

The methodology incorporates facilitated discussion, structured analysis, scenario-based exercises and review of financial evidence. This approach helps participants transfer forensic accounting techniques directly into corporate investigations, partner reviews and dispute support activities.

Organisational impact

For sponsoring organisations, the course strengthens the financial capability required to manage complex joint venture disagreements. Improved Forensic Accounting practices provide a structured basis for investigating disputed costs and financial claims rather than relying solely on conventional accounting reports.

The organisation gains stronger visibility over disputed expenditure. Finance and commercial teams can apply systematic procedures for tracing transactions, reviewing supporting documentation and identifying the source of disputed amounts.

Improved contract claim assessment supports more disciplined commercial review. Teams gain a clearer process for connecting contractual obligations with accounting records, helping management understand the financial basis of claims and counterclaims.

Stronger quantum analysis improves the quality of financial schedules used during negotiations and dispute processes. Claims can be separated into identifiable components, with each amount supported by an appropriate documentary trail.

Disallowed cost investigation also strengthens expenditure governance. Organisations gain greater capability to identify costs that require further review and establish the documentation supporting their treatment.

The course supports better partner relationship management by improving the quality of financial evidence used during joint venture reviews. Clear financial schedules and transparent evidence trails create a stronger foundation for constructive commercial discussions.

Improved reconstruction of accounting records provides an additional capability when historical transactions require investigation. This is particularly valuable where information is distributed across multiple systems, reporting periods or organisational functions.

The organisation also benefits from stronger cross-functional communication. Finance professionals can communicate findings more effectively with contracts, procurement, commercial, audit, legal and operational teams.

The programme supports more efficient preparation for arbitration support activities by establishing structured financial evidence before formal proceedings progress. It also improves internal readiness for audits, partner reviews, claims assessments and financial investigations.

From a compliance and risk perspective, stronger financial investigation capability helps organisations identify weaknesses in documentation, cost allocation and financial controls. Management receives clearer information for addressing recurring control issues and strengthening governance processes.

The overall organisational benefit is a more consistent approach to financial disputes, claims and investigations. The organisation develops internal capability for examining financial evidence, quantifying disputed amounts and presenting findings in a structured professional format.

Personal impact

Participants develop specialist Forensic Accounting skills that complement existing finance, audit, commercial and contracts expertise. The course expands their ability to investigate complex financial issues rather than limiting their role to routine accounting review.

Attendees strengthen their ability to follow transactions from source documentation through accounting systems and financial reports. This improves their understanding of how individual entries contribute to wider claims and disputes.

Participants develop stronger quantum analysis capability and gain practical experience in constructing financial calculations that clearly show the basis of disputed amounts.

Contract claim assessment skills help attendees interpret financial implications within commercial arrangements. They become better equipped to examine whether financial claims are supported by the available accounting evidence.

The course strengthens investigative judgement by requiring participants to examine evidence systematically, identify inconsistencies and distinguish factual findings from assumptions.

Professionals also develop stronger disallowed cost investigation capability. This supports finance and commercial responsibilities involving joint venture expenditure, operator charges and disputed cost recovery.

The programme improves partner dispute evidence preparation by teaching participants how to organise financial documentation and establish clear audit trails.

Participants gain practical arbitration support skills relevant to financial schedules, evidence review and claim analysis. These capabilities improve collaboration with internal legal and commercial teams without requiring participants to act as legal advisers.

Damages calculation techniques provide additional capability for professionals involved in financial claims. Participants learn how to structure calculations and communicate the underlying financial basis clearly.

The ability to perform reconstruction of accounting records strengthens professional confidence when dealing with incomplete or fragmented historical information.

The course also enhances career capability for professionals working across finance, audit, commercial management, contracts, joint venture management and risk functions. These skills support broader responsibilities involving financial governance, claims and contentious commercial matters.

Who should attend

- Joint Venture Accountants — Require specialist skills for reviewing partner expenditure, cost allocations and disputed financial records.
- Financial Controllers — Need stronger oversight of financial evidence, disputed costs and claim calculations.
- Forensic Accountants — Strengthen sector-specific investigation techniques for oil and gas joint venture matters.

- Internal Auditors — Benefit from advanced approaches to transaction investigation, evidence assessment and financial dispute analysis.
- External Auditors — Gain practical insight into complex financial evidence arising from contentious commercial situations.
- Commercial Managers — Need stronger financial capability when assessing claims, counterclaims and contractual cost issues.
- Contracts Managers — Benefit from understanding how contractual provisions connect with accounting evidence.
- Joint Venture Managers — Require improved capability for analysing partner disputes and expenditure disagreements.
- Claims Professionals — Strengthen financial methods for claim assessment, quantum analysis and damages calculation.
- Finance Managers — Develop advanced investigative approaches for complex financial disagreements.
- Risk Managers — Gain greater visibility of financial dispute risks and control weaknesses.
- Compliance Professionals — Strengthen financial investigation capability within corporate compliance and risk environments.
- Legal and Dispute Support Professionals — Gain practical understanding of financial evidence used in commercial disputes and arbitration support.
- Procurement Professionals — Improve understanding of financial evidence surrounding disputed procurement expenditure and supplier transactions.
- Senior Finance and Commercial Leaders — Strengthen oversight of financial claims, partner disagreements and dispute-related decision-making.

Course outline

Foundations of Forensic Accounting in Oil and Gas Disputes

This module establishes the principles of Forensic Accounting within oil and gas joint venture environments. It examines the role of financial investigation in identifying disputed transactions, evaluating evidence and establishing reliable financial findings.

Contract Claims and Disallowed Cost Investigation

This module focuses on contract claim assessment and the investigation of disputed expenditure. Participants examine how accounting evidence is tested against contractual requirements and how disallowed costs are identified and documented.

Quantum Analysis and Damages Calculation

This module develops practical capability in quantum analysis and damages calculation. Participants examine methods for quantifying disputed amounts, separating claim components and presenting calculations transparently.

Financial Evidence, Records Reconstruction and Arbitration Support

This module focuses on the preparation and analysis of partner dispute evidence. Participants develop methods for reconstruction of accounting records, evidence organisation and arbitration support based on documented financial information.

Integrated JV Dispute Investigation and Resolution Support

This module integrates the financial investigation techniques covered throughout the course into a complete joint venture dispute scenario. Participants apply Forensic Accounting, contract claim assessment, quantum analysis and evidence evaluation within an integrated commercial investigation.

Certificate

Attendees receive a Certificate of Completion from Institute For Oil & Gas Training upon successfully finishing the course. The certificate recognises completion of the programme and participation in its professional training activities.

Attendance throughout the course is required to receive the Certificate of Completion. Participants are expected to attend the scheduled course sessions and actively engage with the programme activities.
