

IFRS for Oil & Gas Entities: Revenue Standards Training Course

OGI-1093 · 5 days · 12 CPD hours · English

Overview

IFRS for Oil & Gas Entities: Revenue Standards Training Course from [Institute For Oil & Gas Training](#) develops practical financial reporting capability for professionals managing revenue recognition, joint arrangements, asset impairment and segment reporting across complex petroleum operations. The course addresses the accounting challenges created by production-sharing arrangements, joint ventures, long-term supply contracts, upstream assets, development expenditure and multiple revenue streams.

Oil and gas organisations operate through commercial structures that require disciplined interpretation of International Financial Reporting Standards. Revenue accounting is particularly significant because petroleum companies recognise income through arrangements involving crude oil, natural gas, liquefied natural gas, refined products, transportation services, processing activities and other contractual obligations. Accurate application of IFRS 15 revenue from contracts with customers provides a structured basis for analysing contracts, identifying performance obligations, determining transaction prices and recognising revenue in accordance with the transfer of control.

The course also connects revenue reporting with wider financial reporting requirements affecting petroleum entities. Participants examine IFRS 11 joint arrangements and its relevance to joint operations and joint ventures, particularly where oil and gas projects involve multiple participating interests. The programme also addresses IAS 36 impairment of assets, including cash generating unit identification, recoverable amount and value in use. These areas are essential when commodity prices, production profiles, reserves, development plans and project economics influence the carrying value of petroleum assets.

The financial reporting environment also requires clear understanding of IFRS 8 operating segments and IAS 16 property plant and equipment. Oil and gas entities maintain significant asset bases covering exploration infrastructure, production facilities, pipelines, processing equipment and other operational assets. Appropriate classification, measurement, depreciation and impairment assessment support reliable financial statements and stronger management decisions.

Institute For Oil & Gas Training structures this programme around practical oil and gas reporting situations rather than theoretical accounting discussion. Participants work through contract analysis, revenue recognition scenarios, joint arrangement structures, impairment assessments and segment reporting cases that reflect the financial realities of petroleum businesses.

The programme addresses a common skills gap between technical accounting requirements and operational petroleum information. Finance teams require accurate production, sales, contractual and asset information from commercial, engineering, operations and project teams. The quality of financial reporting therefore depends on effective coordination across functions. This course strengthens the ability to interpret operational information and

convert it into consistent IFRS-based accounting conclusions.

Particular attention is given to judgement areas that require structured documentation. Participants examine how contractual terms influence accounting treatment, how performance obligations are identified, how transaction prices are assessed, how variable consideration is addressed and how revenue is recognised when control transfers. The course also explores the relationship between accounting conclusions and supporting evidence.

For oil and gas organisations, robust IFRS reporting supports stronger governance, transparent financial communication and more consistent management information. It also improves the ability of finance professionals to challenge assumptions, identify reporting risks and communicate accounting implications to senior management, auditors and operational stakeholders.

Objectives

Institute For Oil & Gas Training delivers the course through an applied corporate learning approach centred on realistic petroleum industry situations. The methodology combines expert-led discussions with practical case studies, contract analysis, financial reporting exercises, group problem solving and scenario-based decision making.

Industry Case Studies

Participants analyse oil and gas scenarios involving production sales, long-term supply contracts, joint operations, joint ventures and asset impairment. Each case focuses on the accounting decisions that arise from actual business structures.

Contract Analysis Exercises

Participants review representative contractual arrangements and identify the information required for IFRS 15 analysis. Exercises focus on performance obligations, transaction price considerations, allocation principles and revenue recognition.

Impairment Assessment Scenarios

Practical scenarios examine cash generating unit identification, recoverable amount calculations and value in use assessments. Participants assess how operational and commercial assumptions influence impairment conclusions.

Group Exercises

Group activities encourage finance, commercial and operational perspectives to be considered together. Participants work through accounting issues, compare interpretations and develop structured conclusions supported by relevant IFRS requirements.

Management Reporting Scenarios

Participants examine how IFRS 8 operating segments affects financial reporting and management information. Scenarios address segment identification, reporting structures and the relationship between internal management information and external financial reporting.

Facilitated Professional Discussion

The delivery approach encourages participants to connect IFRS requirements with the commercial realities of petroleum operations. Discussions focus on practical judgement, documentation, controls and communication with stakeholders.

Training methodology

- Apply IFRS for Oil & Gas Entities principles to revenue and financial reporting situations
- Interpret IFRS 15 revenue from contracts with customers within petroleum sales and service arrangements
- Identify performance obligations within complex oil and gas contracts
- Analyse transaction prices and revenue recognition requirements under IFRS 15
- Understand the financial reporting implications of IFRS 11 joint arrangements
- Distinguish relevant accounting considerations for joint operations and joint ventures
- Apply IAS 36 impairment of assets principles to petroleum assets
- Establish an appropriate approach to cash generating unit identification
- Assess recoverable amount using relevant impairment methodologies
- Apply value in use principles to impairment assessments
- Understand the relevance of IFRS 8 operating segments to petroleum reporting
- Analyse segment information and its relationship with internal management reporting
- Apply IAS 16 property plant and equipment principles to significant oil and gas assets
- Strengthen consistency in accounting judgements and supporting documentation
- Improve collaboration between finance, commercial, project and operational teams
- Identify common IFRS reporting risks within oil and gas entities
- Strengthen the quality and reliability of financial reporting decisions
- Communicate IFRS accounting conclusions clearly to management and other stakeholders

Organisational impact

The programme strengthens the organisation's financial reporting capability by connecting IFRS requirements with petroleum operating realities. Finance departments gain a more structured approach to revenue recognition, asset measurement, joint arrangement accounting and segment reporting.

A stronger understanding of IFRS 15 revenue from contracts with customers supports greater consistency in analysing customer contracts and determining when revenue is recognised. This contributes to improved reporting controls and clearer communication between finance, commercial and sales functions.

The programme also strengthens the organisation's ability to identify accounting implications within joint project structures. Understanding IFRS 11 joint arrangements supports more consistent treatment of interests in joint operations and joint ventures and improves coordination between finance teams and project stakeholders.

Improved knowledge of IAS 36 impairment of assets supports more disciplined assessment of petroleum assets when project economics change. Structured cash generating unit identification helps finance teams connect impairment testing with the way assets generate cash flows. Assessment of recoverable amount and value in use provides a stronger basis for documenting impairment conclusions.

The course also supports more effective segment reporting through practical understanding of IFRS 8 operating segments. Clearer reporting structures help management evaluate business activities and communicate relevant financial information.

Knowledge of IAS 16 property plant and equipment strengthens the accounting treatment of major operational assets. This is particularly relevant to organisations managing extensive production facilities, processing infrastructure, pipelines, equipment and other long-term assets.

From a governance perspective, stronger IFRS capability supports more consistent accounting policies, better documentation and clearer internal review processes. It also improves the quality of discussions between finance professionals, auditors, commercial teams, project managers and senior executives.

The sponsoring organisation benefits from employees who understand how operational decisions affect financial reporting. This creates stronger integration between financial control and business operations while reducing inconsistencies caused by fragmented interpretation of accounting requirements.

Personal impact

Participants develop practical capability in applying IFRS requirements to complex oil and gas business situations. The programme strengthens their ability to move beyond standard accounting principles and analyse how contractual, operational and commercial factors influence financial reporting.

Professionals improve their confidence in reviewing petroleum contracts and identifying accounting implications under IFRS 15. They develop a structured approach to analysing performance obligations, transaction prices and revenue recognition.

Participants also strengthen their understanding of joint arrangement accounting. This enables finance professionals to communicate more effectively with project and commercial teams when assessing joint operations and joint

ventures.

The impairment component develops practical capability in evaluating petroleum assets under IAS 36. Participants gain stronger skills in cash generating unit identification, recoverable amount assessment and value in use analysis.

The programme enhances professional judgement by requiring participants to evaluate evidence, identify relevant IFRS requirements and document clear accounting conclusions. This supports stronger performance in financial reporting, controllership, accounting advisory and finance management roles.

Participants also improve their ability to communicate technical accounting matters to non-finance stakeholders. This capability is valuable when finance teams work with engineering, operations, commercial, project management and executive teams.

The course provides a broader understanding of how revenue, assets, joint arrangements and operating segments interact within the financial reporting environment. This supports continued professional development and strengthens readiness for responsibilities involving complex petroleum accounting matters.

Who should attend

Financial Reporting Managers

Designed for managers responsible for preparing, reviewing or approving financial reporting information and IFRS accounting conclusions.

Financial Controllers

Relevant for controllers overseeing accounting policies, reporting controls, asset accounting and financial statement quality.

Oil and Gas Accountants

Supports accountants responsible for revenue, assets, joint arrangements and financial reporting within petroleum organisations.

Management Accountants

Useful for professionals connecting operational performance and internal management information with external financial reporting requirements.

Commercial Finance Professionals

Provides relevant capability for professionals reviewing contracts, customer arrangements, pricing structures and commercial transactions.

Joint Venture Accountants

Supports professionals responsible for accounting and reporting associated with joint operations and joint ventures.

Asset Accounting Specialists

Relevant for professionals managing accounting information for major petroleum infrastructure and operational assets.

Finance Business Partners

Strengthens the ability to advise operational and commercial stakeholders on the financial reporting consequences of business decisions.

Internal Audit Professionals

Provides greater understanding of IFRS reporting areas relevant to revenue, assets, impairment and segment information.

Finance Directors and Senior Finance Managers

Supports senior professionals responsible for financial governance, reporting quality and accounting policy decisions.

Commercial and Contract Management Professionals

Helps professionals understand the financial reporting implications of contractual structures and customer arrangements.

Project Finance Professionals

Relevant for professionals involved in the financial evaluation, monitoring and reporting of oil and gas projects.

Course outline

IFRS Revenue Recognition in Oil and Gas

This module establishes the foundations for applying IFRS 15 revenue from contracts with customers to petroleum business arrangements. The focus is on translating complex commercial contracts into clear accounting conclusions and establishing a consistent revenue recognition process.

Joint Arrangements and Petroleum Interests

This module examines how oil and gas entities account for interests in collaborative projects under IFRS 11 joint arrangements. The focus is on understanding the structure of arrangements and determining the appropriate accounting treatment for participating interests.

Impairment of Petroleum Assets

This module develops practical capability in applying IAS 36 impairment of assets to oil and gas operations. Participants examine how cash generating unit identification, recoverable amount and value in use influence impairment assessment for petroleum assets.

Segment Reporting and Petroleum Business Performance

This module focuses on the application of IFRS 8 operating segments to organisations with diverse petroleum activities, geographic operations or business lines. Participants examine how internal management structures influence external segment reporting.

Property, Plant and Equipment in Petroleum Reporting

This module examines the accounting treatment of significant operational assets under IAS 16 property plant and equipment. The focus is on recognition, measurement, depreciation and asset information relevant to oil and gas infrastructure and production operations.

Scheduled dates

Dates	Venue	Format	Fee
18 - 22 Jan 2027	Abu Dhabi, United Arab Emirates	In person	£4,100
18 - 22 Jan 2027	Abuja, Nigeria	In person	£4,100
18 - 22 Jan 2027	Accra, Ghana	In person	£4,100
18 - 22 Jan 2027	Addis Ababa, Ethiopia	In person	£4,100
18 - 22 Jan 2027	Al Ain, United Arab Emirates	In person	£4,100
18 - 22 Jan 2027	Al Khobar, Saudi Arabia	In person	£4,100
18 - 22 Jan 2027	AlUla, Saudi Arabia	In person	£4,100
